Subject Make Medication Labels Safer!

02/26/2010 10:13 AM

Please respond to
Lawrence Daniell
<larrydaniell@yahoo.com>

Feb 26, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. Lawrence Daniell

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. SANDRA BLACKBURN

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Dr. Edmund Levin, M.D.

Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Ruby Mitchell

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Peggy Stewart

Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Sara Shopkow

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. Richard Verdugo

Feb 25, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information. That's an outrage!

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Darcy Skarada

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

<revcurt@charter.net>

Feb 26, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Dr. Curt Miner

Feb 26, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. Donald Cohen

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. John Ladd

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. peter d. king

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. Howard Woo

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. Willy Aenlle

Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Subject: Make Medication Labels Safer!

02/27/2010 10:47 PM

Please respond to darryl bernard <daustin49@hotmail.com>
--

Feb 28, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. darryl bernard

<htmc@cox.net>

Feb 28, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. HANAKO MCLEAN

Please respond to Jean-Anne Fitzpatrick <ja_fitz@hotmail.com>

Feb 26, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Jean-Anne Fitzpatrick

Feb 26, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

The ability to read a prescription label or dosing instructions can mean life or death. These messages are crucial to sick patients. Access to them should be quick and simple. Valuable resources are wasted - and lives lost - from medication errors due to difficult-to-read instructions. This is an easily-correctable problem. Please have the courage to insist on safer, clearer labelling.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Elinor Burnside

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Please do the right thing

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Tami Goveia

Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Lenore Nieters

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mrs. Helen Kay

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Feb 25, 2010

Ms. Carolyn Klein
1625 N Market Blvd, N219
Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

Pharmacies need to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

Thus, it came as an unwelcome surprise when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. My 70s-ish parents have this problem. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Mr. Peter Wong

The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Hilary Zunin

Sacramento, CA 95834

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.

Sincerely,

Ms. Velma Sims

Dear Ms. Klein,

Confusing or hard-to-read prescription labels pose a major threat to the safety of patients, especially seniors and others with limited eyesight. We need safer, clearer labels to help prevent deadly errors.

I urge the California Board of Pharmacy to require pharmacies to use a minimum 12-point font for the most important information on medication labels, so that patients can more easily read their prescriptions.

Based on two years of study, the Board's draft regulations would have required pharmacies to standardize labels and print important information in 12-point font. The American College of Physicians and several experts supported this proposed regulation as a much-needed improvement over the 9 or 10 point font currently used by most pharmacies.

However, seniors and patient safety advocates were surprised when the Board sided with pharmacy retailers in the 11th hour and overturned their own studied recommendations changing the regulations to require only a 10-point font minimum. The Board's action at its February 17th meeting ignores the recommendations of experts and fails to protect our seniors and other patients from medication errors. These new regulations do not go far enough to make prescription labels safer for Californians.

According to the American Academy of Family Physicians, approximately one in three Americans have a vision-reducing eye disease by the age of 65. It is too dangerous to force our parents and grandparents to strain to read their dosing instructions and other essential prescription information.

Requiring a 12-point font on the most important parts of medication labels is a small step that will save lives. I urge the Board to return to its initial recommendation and vote for stronger prescription label standards for Californians.
