Technology Challenges and Opportunities to Implementing an E-Prescribing Solution

Jim Jones
Manager Healthcare Solutions
jjones@hp.com
Industry Perspective

- Short review of last 5 years to set the stage
- It really is all about the patient
- Digitally integrating the hospital/physician practice
- Visual of the road to the ultimate goal-interoperable health records for all
- Listing of some initiatives in play (3)
- Lessons from organizations that have adopted or are running programs to encourage/reward E-Prescribing
The road to adoption

eRx Collaborative established in MA – 2003
Formed by BCBS, Tufts, and the Neighborhood Health Plan to promote ePrescribing in MA

Partners for Patients: Family Physicians + Industry = Electronic Health Records
American Academy of Family Physicians Partners With Leading Information Technology Companies to Provide Electronic Health Record Technology to Medical Practices

FOR IMMEDIATE RELEASE
November 12, 2003

CCR (Continuity of Care Record) Initiative driven by AAFP, MA Health Association and industry 2003,4,5-to eventual resolution of CCR and CDA adoption/clarification by ASTM/HL7
Focused on eventual goal of interoperable care record among any provider/physician/patient
Another step on the road to encourage change

February 2004

Sen. Hillary Clinton (D, N.Y.) has introduced a five-point plan to modernize the health care system by:

- Increasing research on the quality of care, including comparative studies of drugs and treatments.
- Establishing a standardized reporting system that allows patients to compare clinicians' performances.
- Building an information technology infrastructure that enables data sharing.
- Giving patients and clinicians instant access to health information, including research findings.
- Conducting studies and demonstrations to identify payment systems that reward quality.
Bush and Medicare Wants Electronic Scripts

(February 04, 2004) The Department of Health and Human Services will develop an electronic prescription program for use with its new Medicare Part D drug benefit. "Electronic standards will reduce the number of prescribing errors that occur each year and protect Medicare beneficiaries against the possibility of medication errors," according to President Bush's proposed 2005 budget for HHS.

- Bush touts digital health info
- BY Sara Michael
  April 26, 2004 President Bush this week outlined a plan to have electronic health records for most Americans within 10 years.
Subsequent Initiatives

- DOC-IT
- PQRI Reporting
- MIPPA Legislation (Medicare Improvements for Patients and Providers Act-July ’08)
- MITA-(Medicaid Information Technology Architecture)
- CCHIT (Certification Commission for Healthcare Information Technology Architecture) agrees to extend certification/review to E-Prescribing software
- SureScripts-RxHub merge to complete national network
- DEA delivers plan to include controlled substances in CMS E-Prescribing initiative
- Multiple states apply for and begin using grants to fund E-Prescribing Pilots
What is a Digital Hospital?

- Relies on technology as an integral & fundamental part of its business strategy

- Enables the organization to leverage its potential for delivering higher-quality patient centric care, in increasingly efficient ways through the use of technology & process redesign.

- Builds on an Enterprise Architecture that goes beyond advanced clinical systems & includes technology integration to create a pervasive, real-time health information environment
Digital Hospital Enterprise Architectures in many Provider settings are well on their way

The Hospital Care Process (Value Chain)

- Admission/Emergency
- Diagnostic
- Therapeutic
- Prognosis
- Rehabilitation
- Discharge

- Radiology
- Laboratory
- Pathology
- Consultations
- Surgery
- Medications
- Blood transfusion
- Progress monitoring

Evidence Based Medicine

Quality Standards

Clinical Guidelines

Standardized procedures

Structured data

Outcome measures

SOA Enabled Enterprise Architecture
Supporting Converged Technologies
Medical, Building Control, Communications & Information
However, the infrastructure of hospitals today, remains fragmented
Interconnectivity is key to interoperability.

Providing a convergence of IP for the infrastructure.
The Digital Hospital provides internal and external connectivity for the patient record.
Cost/Benefit Analysis is well documented

- Identification of business objectives
- Establish key facts – salaries, time taken for tasks
- Estimate process improvement with solution
- Calculate benefit in time saved
- Convert time saved to financial value using key facts
- Assess impact on qualitative measures.

Measures:
- Quantitative benefits
  - Time saved
  - Cost reduction
  - Revenue enhancement
- Qualitative benefits
  - Patient satisfaction
  - Staff satisfaction

Can be applied pre- and post-implementation
Benefits to such a Strategy-in-action
Digital Hospital value to all stakeholders

</table>

1. **Implements patient satisfaction and clinical outcomes** by providing access to educational material, entertainment, and self-service applications on interactive patient terminals.

2. **Reduces storage costs and facilitates image sharing** with HP's Medical Archive solution and SWD platforms.

3. **Enhances collaboration and communication** through the integration of multiple networks and medical devices into a unified IP-based communications network (partnered with Cisco and Imatis).

4. **Improves the efficiency of clinical staff** through the use of workflow integration, use of location-based services, and mobile communications.

5. **Improves the physicians ability to navigate complex genetic information.** Data from genetic sequencers is captured, aggregated with our medical data, and a clinical intelligence system assists the medical professional in selecting the best diagnosis or therapy.
To Be Successful You Must Enable Your Providers with a Path to the Future
Starting at the beginning - E - Prescribing

Automate Processes here

Improve efficiencies here

Reduce costs here

Coverage and formulary information

In-office Rx Request

SureScripts/RxHub

POTS Or Web/DSL

Patient history & decision support

Patient

Doctor

PDA/Tablet

Payor
Program Snapshot
Results through Q2 2008

Collaborative prescribers have sent 15.6 million electronic prescriptions since the start of the program in 2003

As of June 30, 2008:
- 2.1 million electronic prescriptions sent YTD
- 218 new prescribers deployed YTD
The Impact of Incentives

- BCBSMA PCP e-Technology incentive implemented in 2004
- Awarded $5.7M in incentive dollars for e-Technology measure in year 1; over $25M in incentives for e-Technology adoption through 2007
Key Lessons Learned

If You Build It, They May Not Come...

- Forums held in centralized locations to educate providers about the technology and to encourage them to sign up for the free offer were not successful
- Technology vendor must go to the physician office directly to engage MDs and their staff

Free is Not Cheap Enough

- Initial start up costs must be subsidized
- Additional incentives required to promote utilization
Key Lessons Learned, continued

Importance of Training

- Ensure technology is intuitive and provider training is focused
- Provide targeted office staff training
- Provide on-site support during roll-out and recommend site champions where applicable

Perceived Lack of Value

- Collaboration between Health Plan competitors can send powerful message
- Highlight efficiency opportunity for providers, specifically with prescription renewal requests, and potential to enhance quality of care
- Discuss e-prescribing benefits for all stakeholders within health care system to improve quality, delivery, and affordability
Key Lessons Learned, continued

Technology Infrastructure
• Confirm appropriate technological infrastructure exists to support e-prescribing prior to implementation
• Engage practice’s IT team early in the deployment process
• Ensure technology is consistent with organization’s security standards and requirements
• Ensure interoperability with existing or future technologies (e.g. EMRs)

Utilization
• Recognize that office staff support is fundamental
• Ensure utilization monitoring and outreach when issues are detected
• Reward and recognize prescribers for successful utilization
• Provide vendors with incentives for utilization
NH’s Approach

• In October 2006, the Governor issued a challenge to the marketplace to make ePrescribing happen

• The NH Citizens Health Initiative provides project management, education, and marketing resources to stimulate the market

• Active partnerships have been developed with providers, employers, payers, and ePrescribing industry to provide a “market” based solution to ePrescribing implementation

Stepping up to the Future
NH CITIZENS HEALTH INITIATIVE

Patrick Miller, MPH
Research Associate Professor
NH Institute for Health Policy and Practice
University of New Hampshire
patrick.miller@unh.edu
NH’s Progress to Date

• ~50% of clinicians have an EMR with some level of electronic prescribing
  ▪ “eRx Lite”
  ▪ the base is largely in place

• 79% of our pharmacies are ready to accept fully electronic prescriptions
  ▪ 179 chain & 47 independent as of June 2008

• Provider awareness building

• Payer connectivity (next slide)
## Payer connectivity for 70+% of NH Residents

<table>

<td>SureScripts</td>
</tr>
</tbody>
</table>
Count of NH prescribers on SureScripts network:

9/30/08 – 338 (168% since start of year)

8/31/08 – 325

5/31/08 – 183

1/31/08 – 126

These figures represent 19 different EMR or ePrescribing platforms operating in NH.
Barriers to Adoption

- Convincing clinicians and office staff that full ePrescribing is better than ePrescribing-lite
- EMR vendor readiness
- “Free is not cheap enough”
- Prioritization within provider IT queues
- DEA and controlled substances
Who is funding the initiatives?

Most of the Initiatives had several sources of funding, but the top two were:

- Healthplans
- Grants—state, federal or both

Additional sources included local organizations and/or sponsors within a community, employers.

Not surprisingly, if the Healthplan is a stakeholder in the Initiative, it is usually a key source of the funding.

*Source* Tony Schuetz, MS
CEO & Managing Partner, Point-of-Care Partners
Project Manager, Southeastern Michigan ePrescribing Initiative (SEMI)
What is your greatest unmet challenge?

- Moving beyond the early adopters.
- Providing an ongoing value proposition for the MD community.
- State and federal/DEA regulations that are not lined up.
- As long as MDs see eRx/EMR as a burden requiring internal work flow changes that no one is paying for, it will not work.
- Reach those physicians that are scared of technology.
- Get additional resources/contracts for expansion.

Continued efforts must be made to change the DEA's regulations to remove the barrier that requires physicians to use two systems-paper and electronic.
What are the lessons learned relative to vendors?

The top three lessons:

- **Support**: Vendors must provide dedicated on-site office support. They need a robust service model.

- **Delivery**: Vendors should deliver what is promised and make sure that what is promised has actually been implemented in diverse environments and it works.

- **Workflow**: Vendors need to understand the physician’s workflow and stay innovative.

Comments:

- “Everything costs more and takes longer by a factor of 2.”
- “Vendors who did not have “feet on the street” saw lower adoption rates.”
- “Deployment to a physician does not mean use.”
- “Have a single point of contact who always knows what is going on.”
Conclusions/Recommendations

A successful Initiative should consider the following:

- Professional, dedicated project management a must
  - Experience in ePrescribing & neutral orientation preferred
  - Must manage vendors, data, physician organizations & project

- Incentives are crucial
  - Compliment existing health plan programs
  - Enable physicians to capture MIPPA incentives
  - Provide for 'most important' physicians

- Physician utilization data base is critical
  - Allows ROI analysis
  - Track incentive payments
  - Managed by project manager
Positive Results

• Successful adoption yields measurable results
• TEPR annual challenge
• Examples, which follow, highlight commitment and opportunity to move to the next phase—Interoperable patient information within a community and a structural foundation for perpetuating EHR access and portability
E-Prescribing Benefits—circa 2005

Quality of Care
1 of every 73 prescriptions is cancelled or modified because of a drug-drug or drug-allergy (DRFIRST-CAQH study)
Avoidance of 48,000 medication errors in a 300 physician practice – self reported Aurora Practice using AllScripts TouchWorks Rx+
10% reduction in malpractice rates as a result of using an e-prescribing application Temple University Health System – AllScripts TouchWorks Rx+

Operational/Administrative Improvements
50% reduction in pharmacy calls – Joliet Medical Group with TouchWorks Rx+
2 hours/day less spent on prescription process by physician offices Tufts Health Plan Study with PocketScript

“…enabling our staff to focus on patient care versus administrative tasks.” John Drew CFO Joliet Medical Group
E-Prescribing Benefits continued

Pharmacy Program Compliance
Increase in generic utilization
  43% to 55%  Tufts Health Plan Study with PocketScript
  40% to 52%  Temple University Health System – AllScripts TouchWorks

Cost savings
  $0.30 - $0.40 pmpm cost savings  Tufts Health Plan Study with PocketScript
  $0.75 - $3.20 per prescription savings compared to paper prescription  CGEY – AllScripts analysis of 680,000 e-prescriptions
  35% of physicians who receive an alert about an off formulary drug change the prescription  Kaiser Mid Atlantic report

…..However, after all of that….you must be present to win!
Physician and Nurse recruitment/retention improved*

- Wireless access combined with total office commitment to electronic records provides a more attractive workplace.
- Provides a differentiator which is a major factor in recruitment and retention of physicians/nurses/staff.
- Demonstrates to clinic staff and to patients that the practice is dedicated to the best interest of the patient.
- Little things like unavailable information/history/labs at patient encounter-visible and annoying to staff and patient before, are gone.
- Lookups or access to on-line meds abstracts or Mapquest for a pharmacy convenient for the patient, is instantly there!
- Cuts down on chart updates, overtime, stress, and time spent doing redundant and costly tasks.
