

The Board of Pharmacy has received notice of the following product recall:

Dr. Reddy's Laboratories initiated a voluntary nationwide recall on October 1, 2019, (at the retail level) for all of its Ranitidine medications sold in the US market. The initial retail-level recall of prescription Ranitidine capsules, 150 mg and 300 mg, was updated to a consumer-level recall on October 23, 2019. This change is being made based on the USFDA's recent feedback that all NDMA-related prescription drug recalls are to be expanded to the consumer level. The recall level for OTC products remains at the retail level.

All Ranitidine products with expiration dates September 2019 to March 2022 are being recalled. The shelf life of OTC products is 24 months and Rx products are 36 months. The product Distribution dates are January 2017-September 2019. The product details are mentioned below:
