

The Board of Pharmacy has received notice of the following product recall. The Board strongly encourages pharmacies to immediately review their quality assurance and recall policies and procedures to determine if any corrective action is required.

Tailor Made Compounding is expanding its recall of sterile products within expiration and produced prior to March 15, 2022, due to a lack of assurance of sterility. The issue was brought to Tailor Made Compounding’s attention during and following a recent inspection by the U.S. Food and Drug Administration. Intravenous administration of drugs intended to be sterile where sterility may not be assured could result in the introduction of infectious agents to the user.

To date, Tailor Made Compounding has not received any reports or concerns from patients relating to the safety of the recalled sterile compounded products, and no patients have reported any adverse events attributed to the sterile drug products subject to the recall. We encourage all customers to examine their inventory for products subject to the recall. If you/your patient wishes to return a product subject to this recall, Tailor Made will dispense a new product upon receipt of tracking information indicating the recalled product is in transit to our pharmacy. However, if Tailor Made receives a returned controlled substance covered under this recall, we will contact the prescriber to request authorization prior to sending the replacement product.

In addition, if you may have further distributed this product, please identify your customers and notify them at once of this product recall. Your notification to your customers may be enhanced by including a copy of this recall notification letter.

Tailor Made Compounding is committed to continuous product quality improvement, and along with the FDA’s suggestions, will be updating facility design, internal processes, and procedures to continue to enhance both product and patient safety. Please note that production of all listed compounded sterile products will continue in one of the facility’s other certified USP <797> compounding suites that is engaged in compounding and not affected by the recall.
